

eCollaboration

eCollaboration has been built by an experienced in-house team, with industry and client input. It sets the industry standard for web-based collaboration technology.

With the highest levels of data and document control and security, you can be sure that your information is safe and professionally managed.

Our **ASP** model helps lower your project expenditure, reduces risk, and removes the need for specialist internal IT support.

eCollaboration technology is designed to get you started quickly and our training and support ensure high uptake and early user acceptance.

eCollaboration is a web collaboration and project management system designed to manage information through every stage of a construction, engineering, IT project, as well as in ongoing facility management or any other industry area.

eCollaboration system delivers a powerful set of features through an easy-to-use interface that allows project participants to manage and log project activity as they go. Every document, every variation is securely stored and organized for easy, fast retrieval. Clients have access to their information anytime, anywhere, from one single login.

It is a central repository that captures all documentation and correspondence also takes care of version control, giving peace of mind that the job will be done right, the first time.

Of course, with **eCollaboration**, you can do all the usual tasks you would expect in a document & correspondence management system: store, track, search, archive, version control and report on all documents and type of documents.

Why eCollaboration ?

Choosing recognized provider of online collaboration has real benefits. Your project will be supported by training, development and client service teams in the industry, You'll have the reassurance that we are trusted to handle tens of millions of documents, servicing more projects than any other provider.

How else is eCollaboration different?

eCollaboration is the easy way to save time and money on your project. eCollaboration was designed and built with input from the people who actually use it – developers, architects, builders, contractors, engineers, facilities managers and others. The system mirrors standard industry processes, so there is almost nothing to learn. You can just get on with your job
